Linked in profile: <https://www.linkedin.com/in/roopa-k-s/>

GitHub: <https://github.com/Roopa78>

Motivated **Cloud & DevOps Engineer (Fresher)** with hands-on experience in **AWS, Azure, Terraform, Ansible, Docker, and GitLab CI/CD**. Strong foundation in **Linux, networking, automation, and cloud security**. Passionate about building scalable, secure cloud infrastructure and automating deployments using Infrastructure as Code (IaC). Seeking an entry-level Cloud/DevOps or L1 IT Support role to contribute and grow.

## Technical skill

|           |                                                                                                                                                                                                              |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AWS       | IAM, S3, VPC, EC2, EBS, EFS, Load Balancer, Autoscaling, Lambda, Route53, Cloud Watch, Cloud Trail, Cloud Front, SNS &SQS.                                                                                   |
| Azure     | Azure AD, Azure VM, Azure Disks, Storage account , Key-Vault, Load balancer, Vnet , App gateway, App services, DNS, Traffic manager, SQL, Azure Monitor. NSG, Network firewall. AKS.                         |
| Terraform | Terraform operations (Init, validate, plan, apply, destroy), Modules, State And Remote Backend, Registry, Terraform with CI/CD, Debugging errors.                                                            |
| DOCKER    | Docker files creation, Docker container builds, Docker file, Docker Networking, Docker volume, Docker Hub, Docker storage and volumes.                                                                       |
| GIT       | GIT CLONE, GIT COMMIT, GIT PUSH, GIT ADD, GIT REBASE, GIT MERGE, GIT STASH, GIT RESET, GIT BRANCH, GIT PULL, GIT FETCH                                                                                       |
| Ansible   | Automation with playbook, Hosts and group,, Ansible roles, Ansible Vault, Inventory, Galaxy, Automate with AWS EC2 and Azure VMs.                                                                            |
| LINUX     | Linux administrative commands, Package Management, Networking, Files and Directories, SSH connections, Vi Editor, File Permission, User Management, Disk Managements, Service Management, Security commands, |
| Git-Lab   | Git lab configuration, Git Bash, Git CI, Git lab integration with Terraform, groups, variables,                                                                                                              |

## Internship

### Cloud Institution - Intern

Sep 2025 – Jan 2026

- Deployed AWS infrastructure using EC2, S3, RDS, VPC, and IAM.
- Automated provisioning with Terraform & Ansible.
- Containerized applications with Docker.
- Monitored systems using AWS CloudWatch & Prometheus.
- Secured cloud resources with IAM roles & KMS encryption.
- Worked on serverless solutions using AWS Lambda & API Gateway.

Tech Stack: AWS, Terraform, Ansible, Docker, GitHub, CloudWatch.

## Projects

### Multi-Tier Architecture Deployment on AWS

This project implements secure and scalable three-tier architecture in AWS within a custom VPC. It includes EC2 instances for Web and Application tiers, with AutoScaling to dynamically adjust capacity based on traffic and workload. An Application Load Balancer distributes traffic to the Web Tier for high availability, while a MySQL database in private subnets securely stores application data and monitor the EC2 performance using CloudWatch. This architecture ensures fault tolerance, optimal resource usage, and secure communication between tiers.

### Dockerized Django Application

Developed a Django web application and containerized it using Docker for consistent deployment. Created a Dockerfile to install dependencies, copy project files, and run the Django server inside a container. Exposed port 8000 and ran the application locally using docker build and docker run. Used SQLite for backend data storage and configured environment settings. Learned how to package, run, and maintain Python web applications in isolated Docker environments.

### VPC -Secure 2-Tier Application in Private Subnet

Designed and deployed a two-tier demo application inside an AWS VPC using public and private subnets. Configured NAT Gateway, Internet Gateway, and route tables to allow secure outbound access for backend instances in the private subnet. Implemented EC2 instances, security groups, and subnet isolation to ensure the application backend remained protected while the frontend tier handled public access. Gained foundational experience in AWS networking, routing, and secure cloud architecture.

### Automating AWS Infrastructure Provisioning with Terraform

This project leverages Terraform to automate AWS infrastructure provisioning. I defined resources such as a multi-tier architecture, VPC, auto-scaling groups, ELB, S3, and IAM roles using Terraform scripts. These scripts were stored in a Git repository, automating the deployment process. The pipeline was set up to trigger terraform plan for previewing changes and terraform apply for deploying them when changes were pushed. This automation improved consistency across environments, minimized manual intervention, and enhanced the speed and scalability of our AWS infrastructure deployments.

## Work Experience

### Digital Marketing Executive:

Varnaaz Technologies Pvt Ld – (May 2019 - Jul 2020)

Techinfond Software Solutions Pvt Ld – (July 2021 - Nov 2021)

## Skills

- Strong analytical mindset with effective problem-solving and debugging skills.
- Understanding of networking fundamentals including IP addressing, OSI layers, DNS resolution, VPN, and load balancing.
- Knowledge of cloud infrastructure, services, and security best practices.
- Familiar with DevOps tools and practices.
- Understanding of data storage and database technologies, such as SQL and NoSQL.
- Basic knowledge of Python programming.

## Education

Shri Morarji desai model residential school - SSLC | 2011-2012

Thimmareddy PU college for girls, Davangere - PUC | 2012-2014

GM Institute of technology, Davangere - B.E (ELECTRONICS & COMMUNICATION) | 2014-2018

**Personal Profile**

Name : Roopa KS  
DOB : 18/03/1997  
Father Name : Suresh K  
Mother Name : Padma K  
Husband Name : Muthyala Shyam  
Languages Known : Kannada, Telugu, Hindi and English.  
Permanent Address : C/o Muthyala shyam, Mallapura, Shivamogga(D)

**Declaration:**

I hereby declare, that the information furnished above is true to the best of my knowledge.

Place: Bangalore  
Date:

Yours Sincerely,

(Roopa KS)
